Tilcon Educates on Aggregates

Children in Delaware schools are learning about the important role aggregates play in their everyday lives and potential future careers in the aggregates industry.

Tilcon-Delaware, has been traveling to area schools throughout Kent County, Del., to teach kids about the aggregates industry and the potential careers that it offers.

The Dover, Del.-based paving and construction materials supplier is educating the children about the aggregates industry as part of the Science, Math and Technology Alliance in the "What in the World" program.

The program includes grades three through 12 in all schools throughout Delaware, with about 15 to 16 schools participating each year. Tilcon has participated in the program's Science Alliance for more than seven years.

"The fact that you're sparking a child's interest about the aggregate field or something within it, such as why roads sparkle, is very rewarding," Tracie Daddio, a Tilcon employee says. "To see that look of awe when they learn something simple about things they normally take for granted is what makes participating in this program so special."
